

The Varminter™ .223

Quietest Silencer on the market, or your **Money Back!** Who else is willing to make that offer? Varmint Hunter and Bench Rest shooter's DREAM.

Utilizing a square bore (Quadratum Technology™) to increase surface area which more efficiently channels additional heat from the gas blast to the proprietary titanium alloy tube in a masterful wicking effect. The bore and tube work synergistically to change the sound tone and more efficiently convert gas pressure energy to heat energy, creating the quietest silencer on the market, guaranteed.

Accuracy enhancing due to no welding, all parts of The Varminter™ are custom fit together to ensure no stress factors which are created by traditional welding of other higher mass production silencers. Made up of only three parts.

Baffle structure started with a solid bar, CNC machined from proprietary corrosion resistant alloy for maintenance free use and limited lifetime warranty.

*** (165 db on a Tikka T3 Varmint SS with no silencer and then 127 db with The Varminter™)

*** Money Back within 30 days of transfer, reimbursement cannot exceed amount paid.

Length – 8"

Diameter – 1.5"

Weight – 18 oz

Thread – ½ X 28 TPI

Construction – Titanium & SS alloys

Price - \$665 or \$695 for black or green

Manufactured by Liberty Suppressors in Trenton, GA for South Dakota Silencer. This product design and conception began many years ago when the owner of South Dakota Silencer identified a void in the marketplace and worked closely with the owners of Liberty Suppressors to create a silencer specifically for varmint hunting and bench rest shooting at long distances where accuracy, sound reduction, recoil reduction, and weight on the end of the barrel were the most important factors. The Varminter™ has become one of the best-selling silencers on the market for varmint and bench rest shooters alike.

South Dakota Silencer is a Federal Licensed Class 2 dealer and Class 2 manufacturer of NFA firearms based in Sioux Falls, South Dakota. www.SDsilencer.com
